

ELDIR: OVERWATCH

Contract Security Management Made Easy

As a security manager in South Africa, you most likely use a contract security provider, or multiple providers, to manage your organisation's physical security needs. While considered a necessity, security has traditionally been seen as a grudge purchase, and as such, often struggles to compete for funding against other investments that may seem more appealing to executives.

When every cent counts, how do you know whether you're getting value for money?

How do you know:

- if the security officers in attendance meet the requirements you're paying for?
- whether the correct PSIRA grade guards are assigned to your site?
- if each guard has valid PSIRA certifications?
- whether the guards that use vehicles have valid driver's licenses?
- if the guards that carry weapons have valid firearm competencies?
- if each guard has undergone your company and site induction training?
- whether the required compliment of security officers is in attendance, on time, every shift?
- whether supervisors visit your sites regularly?
- if all the required checklists are completed accurately?

Until recently you were reliant on your security company to provide you with this information. Eldir: Overwatch software delivers objective third-party service-level performance data.

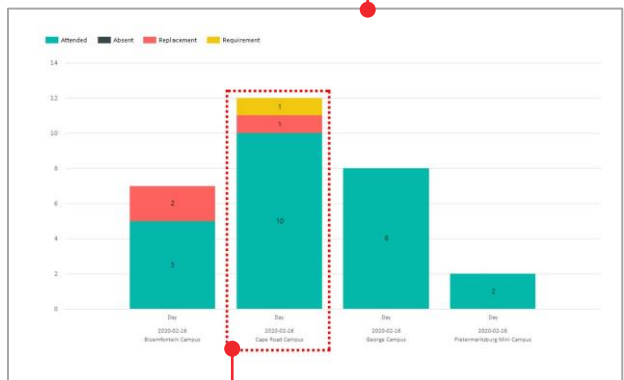

Eldir: Overwatch

The Eldir: Overwatch application puts the power of information at your fingertips, delivering the data that you need to monitor your contract security personnel.

Eldir: Overwatch is designed to:

- manage and monitor data from multiple sites and multiple providers.
- help you to identify, assess, and dispute irregularities, risks, and SLA breaches.
- provide you with all the information that you need to manage and negotiate contract renewals.

With Eldir: Overwatch, contract security goes from grudge purchase to a desirable investment with specific, tangible, and measurable business benefits.
